FY 2011 Homeland Security

City of Miramar Public Safety Headquarters, $5,000,000
City Of Miramar, Broward County, Florida

Funds will be used to demolish and rebuild the Miramar Public Safety Headquarters facility that was heavily damaged by Hurricane Wilma and rendered uninhabitable. Existing Police facilities and staff have been relocated to five separate temporary site locations throughout the City. This decentralized approach has weakened safety operations and the City's ability to provide services to the public.

Emergency Operations Center Construction Project, $3,000,000
City Of Weston, Broward County, Florida

Funds will be used to connect the existing Police Services Center and the nearby Fire and Emergency Medical Services Station by constructing a 5,000 square foot Emergency Operations Center to accommodate City, County, State, and Federal emergency management personnel and equipment prior to, during, and after a disaster event. The current emergency operations center is a small 500 square foot meeting room located in the existing Police Services Center. The new EOC will be able to support over 50 disaster management personnel for training and live action events. The new EOC structure will be wind storm tolerant up to the standards of the current Florida Building Code.

Emergency Power for City Hall and Police Station, $575,000
City Of North Port, Sarasota County, Florida

Funds will be used to separate the two buildings emergency power supply and add a second generator with a transfer switch for City Hall. This would ensure sufficient electricity to fully power the Emergency Operations Center/City Hall and the Police Headquarters independently. City Hall serves as the center of municipal operations and as the Emergency Operations Center for disaster support. During a power outage, emergency electrical service is provided by a backup generator which serves only limited areas of City Hall and is shared by police headquarters. The addition of a dedicated generator to provide emergency electrical service to City Hall is necessary to ensure the continuation of mission critical operations of the City during power outages.

Florida Long Term Recovery Office
FEMA, Orange County, Florida

The purpose of this request is to maintain the Florida long-term recovery office to assist individuals impacted by past hurricanes. The office serves a critical role in the State, and should not be closed as long as there is sufficient work to be done.

Jackson Health System Hurricane Mitigation Structural Reinforcement Initiative, $2,000,000
Jackson Health System, Miami-Dade County, Florida

Funds will be used to structurally reinforce and fortify Jackson's Ryder Trauma Center to withstand higher category storms. Jackson's Ryder Trauma Center is the only adult and pediatric Level 1 Trauma Center in Miami-Dade County. Funding is needed to structurally reinforce and fortify the Ryder Trauma Center through an exterior skin upgrade. According to the Chief

Architect of the Florida Agency for Health Care Administration, medical facilities similarly constructed did not fare well in Hurricanes Ivan and Charley

Lake County Emergency Operations Center, $1,500,000
Lake County, Florida

Funds will be used to provide for a full-time dedicated Emergency Operations Center. The facility is to include fully hardened infrastructure with enhanced construction to ensure the safety, continuity, and security of operations during emergencies, such as storms, hurricanes or terrorism and provide emergency response throughout the county, region, and State. Currently, the EOC is located in the County Administration building in a conference/training room. State assessments have pointed out the inadequacies of this arrangement, and a recent report by the Florida Department of Emergency Management indicated Lake County as a high priority in the state for a new EOC.

Mass Casualty Response Training Center at Indian River State College, $958,000
Indian River State College, Saint Lucie County, Florida

Funds will be used to create an immersive training area that will allow teams of student and professional first responders to take part in mass casualty drills, mock biological or chemical attacks, natural disasters, and other homeland security training scenarios, working with robotic simulators as well as live simulated patients. The Center will prepare first responders, public safety agencies, and disaster relief specialists to react safely and effectively to situations where there are more casualties than responders as may happen in a natural disaster or a terrorist attack.

South Daytona Emergency Operations Replacement Project, $2,000,000
City Of South Daytona, Volusia County, Florida

Funds will be used to replace the current Emergency Operations Center that is currently insufficient to serve the residents of South Daytona. The City's current Emergency Operations Center is located in a facility that has deteriorated over time. This project involves the construction of a 27,000 square foot facility designed to accommodate material and tool storage, in addition to sufficient work space to maintain emergency response vehicles and accommodate key City personnel during severe weather events.

Storm Surge Emergency Power Protection Project, $5,000,000
Mount Sinai Medical Center, Miami-Dade County, Florida

Funds will be used to construct a disaster-resistant, centralized, 5-bay power facility. Mount Sinai's role as the primary community health care provider mandates that immediate steps be taken to ensure that all services and facilities are secure and stable during disaster events. This initiative will mitigate the effects of future hurricanes and flooding through the realignment of facilities and infrastructure. Mount Sinai is a regional Emergency Command Center (ECC). It is critical that its facilities, power supply and services are and remain available for use by patients, local law enforcement and first responders during disaster events.

Wakulla County Sheriff's Office Communications Upgrade, $850,000
Wakulla County Sheriff's Office, Wakulla County, Florida

Funds will be used to upgrade the current radio system purchased in 1976. The new system will eliminate holes in the current coverage footprint. This will result in much improved

officer and responder safety while allowing the Sheriff's Office to better meet the needs of Wakulla County.
